# **MYTH:** The NFIP encourages coastal development.

**FACT:** One of the NFIP's primary objectives is to guide development away from high-flood risk areas. NFIP regulations minimize the impact of structures that are built in SFHAs by requiring them not to cause obstructions to the natural flow of floodwaters. Also, as a condition of community participation in the NFIP, those structures built within SFHAs must adhere to strict floodplain management regulations enforced by the community.

In addition, the Coastal Barrier Resources Act (CBRA) of 1982 relies on the NFIP to discourage building in fragile coastal areas by prohibiting the sale of flood insurance in designated CBRA areas. While the NFIP does not prohibit property owners from building in these areas, any Federal financial assistance, including federally backed flood insurance, is prohibited. However, the CBRA does not prohibit privately financed development or insurance.

### **MYTH:** Federal disaster assistance will pay for flood damage.

**FACT:** Before a community is eligible for disaster assistance, it must be declared a federal disaster area. Federal disaster assistance

> declarations are issued in less than 50 percent of flooding events. The premium for an NFIP policy, averaging a little over \$500 a year, can be less expensive than the monthly payments on a federal disaster loan.

Furthermore, if you are uninsured and receive federal disaster assistance after a flood, you must purchase flood insurance to remain eligible for future disaster relief.

#### **MYTH:** The NFIP does not cover flooding resulting from hurricanes or the overflow of rivers or tidal waters.

**FACT:** The NFIP defines covered flooding as a general and temporary condition during which the surface of normally dry land is partially or completely inundated. Two properties in the area or two or more acres must be affected. Flooding can be caused by:

- Overflow of inland or tidal waters, or
- Unusual and rapid accumulation or runoff of surface waters from any source, such as heavy rainfall, or
- Mudflow, i.e., a river of liquid and flowing mud on the surfaces of normally dry land areas, or
- Collapse or subsidence of land along the shore of a lake or other body of water, resulting from erosion or the effect of waves, or water currents exceeding normal, cyclical levels.
